

aquapower*
frischwassermodul*

You most probably know that our **rollermaxx®** and **rotoclean®** can also be operated with high pressure.

So far we did not provide suitable high pressure pumps as we believed that the market was already oversaturated.

But due to multiple requests we have now reached the decision to include adequate high pressure pumps in our delivery programme. After having gone through an in-depth testing phase we are now able to supply the following 2 types:

Type	Connection	Max. Pressure	Delivery Rate
aquapower* V1	750 W	20 bar	11 l/min
aquapower* V2	750 W	20 bar	19 l/min (variable)*

* recommended if 2 roller cleaners are simultaneously in use

Included in delivery: separate unit on a stainless steel mounting bracket
suction side: Gardena connection, pressure side: 1,5 m high-pressure hose

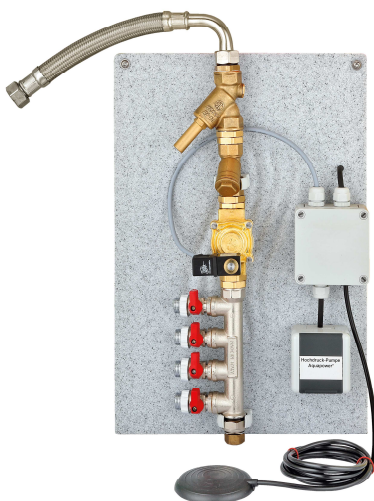

frischwassermodul*

A further sensible attachment is our module for fresh water supply:

1. water consumption is controlled
2. after closing hours all water pipes are definitely cut off !

Naturally, this task can also be carried out by any plumber or electrician. But we experienced that 1st - not all necessary parts are available, and 2nd - one has to organise 2 different craftsmen.

And this is what the fresh water module looks like:

frischwassermodul*

consisting of:
time controlled magnetic valve 1 -20 min.
impulse via hand / foot switch
4 connections 1/2" external thread, pre-assembled

optional:
+ warm water connection

Unrivalled solution at an all-inclusive price – primed for the future!
